Full-Stack Engineer - Codecademy - Full-Stack Engineer Career Path - 2024

Design

UX/UI Design - General Assembly - 2018

2D Animation - Motion Design School - Motion Beast & Fundamentals on After Effects - 2018

Product Design Engineer - Swinburne University of Technology - 2009 - 2014

Programming Languages

HTML, CSS, JavaScript - Codecademy - Full-Stack Engineer Career Path - 2024

Python - Codecademy - Learn Python - 2024

C# - Codecademy - Learn C# - 2024

Experience

www.jonporterfolio.com

Visit my portfolio website demonstrating some of my web development skills and examples of my work, including:

Breakfast Time

- Designed and developed an indicative Full-Stack E-Commerce platform for a Card Shop
- Implemented user authentication, cart management, and product management functionality
- Built a PostgreSQL database to store products, user details, order history, etc.
- Deployed on Netlify, and Render

Wizard Quest

- Developed a text-based adventure game utilising Meta's Llama LLM to generate dynamic storylines
- Integrated React into the frontend for added responsiveness
- Implemented custom AI prompts to create context-aware story progression

Work Experience

Freelancing & Studying 2024

In 2024 I began my career change to Web Development, studying Full Stack Engineering online at Codecademy. Being online, I would me actively participate in forums, Reddit, liaising with friends who are developers, as well as UX designers for feedback and advice in areas. While studying I took on freelance design jobs, primarily for Industrial Design, which were through connections I made during my time in the industry and word of mouth.

Dot Design April 2021 - December 2023

Senior Industrial Designer / Project Manager

- Crafting client-focused solutions within budget and time constraints
- Managing projects from conceptualisation through to installation and delivery
- Generating presentations and graphics for clients
- Collaborating in a cross-functional team environment
- Concurrently managing and maintaining multiple projects
 - Up to 15 projects being kept track of at one time
- Maintaining strict deadline adherence
 - Renders and Presentations could be expected in hours
 - Final deliveries could be expected in weeks
- Delivering high quality solutions within a fast paced environment
 - Often relied upon as the designer who could hit extra tight deadlines
 - One project required conceptualisation, manufacture and delivery in 2 weeks
- Collaborating with internal stakeholders, including sales, designers, accounts, etc.
- Coordinating with external stakeholders, including clients, suppliers, etc.
- Ensuring strict Quality Control, and adhering to strict requirements
- Handling quoting, invoicing, and client/internal meetings
- Liaising and building relationships with both offshore and local stakeholders

Millington Associates, London January 2020 - March 2021

Technical Designer

- Developing designs based on client briefs
 - Was trusted with the largest project we delivered in 2020
- Concurrently managing multiple projects
- Adapting and interpreting designs promptly to meet client preferences
 - Researching ways to achieve client's visions
 - Included floating characters and a 2 metre tall snowglobe
- Ensuring strict Quality Control, and adhering to strict requirements
- Collaborating with internal stakeholders, including sales, design, accounts, etc.
- Liaising and building relationships with local stakeholders

Informed Design October 2018 - April 2019

Senior Industrial Designer / Project Manager

- Crafting client-focused solutions within budget and time constraints
- Project management from beginning to end
- Generating presentations and graphics for clients
- Managed the Design Team
 - 4 Months as the only designer
 - Trained two designers new to the industry
- Concurrently managing multiple projects
- Maintaining strict deadline adherence
- Delivering high quality solutions with quick turnaround times
- Collaborating with internal stakeholders, including sales, designers, accounts, etc.
- Coordinating with external stakeholders, including clients, suppliers, etc.
- Ensuring strict Quality Control, and adhering to strict requirements
- Handling quoting, invoicing, and client/internal meetings
- Liaising and building relationships with both offshore and local stakeholders
